

# Our gift to you.

Severe budget cuts. Increased demand for services. Lack of adequate staffing. Sound familiar? At LibLime, we realize that your library is facing these challenges--and we can help.

We're not just your average library vendor in a highly competitive and heavily saturated market. We're different, our products are different and our business model is different.

## OPEN SOURCE IS THE DIFFERENCE

Open source has been a buzzword in the library community for several years now. But lack of vendor support has made it impossible for many libraries to benefit.

We founded LibLime to meet your vendor needs on open source. We make it possible for vendor-reliant libraries to use open-source software--like Koha--by providing them with outstanding support and training options.

Our services include migration assistance, hosting, installation, configuration, software support and maintenance, and staff training.

## NEVER PAY LICENSE FEES AGAIN!

Believe the hype: open-source software is more feature-rich, more stable, more secure, boasts faster development cycles, and gives users the freedom to customize! No license fees means you pay only for the level of support you need, making open source not only superior but affordable.

These are the reasons we've chosen to support open source in libraries and think you will too.

**VENDOR SUPPORT FOR OPEN SOURCE**

## No license fees: Unleash your potential!

Koha eliminates proprietary closed-source barriers to enable new realities of open access, affordability and free innovation. It unleashes library potential and empowers staff to provide extraordinary technology-enhanced services.

Koha goes beyond catalog searching to provide a portal for easy, autonomous access to multi-format resources. Further, Koha's intuitive interfaces ensure fast, relevant search results and include outstanding self-service tools.

## Koha is platform-independent and standards-compliant

Koha is built using industry standards and protocols that ensure interoperability with other systems and technologies, enhance resource sharing capabilities and support existing workflows and tools.

- MARC21, UNIMARC
- Z39.50 server and client, NCIP
- 'opensearch', RSS and LDAP
- powerful data indexing and analyzers to optimize record retrieval
- DBMS access tools and deep linking
- custom reporting, cataloging and administration interfaces
- Linux, MySQL, Zebra, Perl, Apache

Additionally, Koha provides input enhancements to overcome common obstacles to successful searching:

- **spell-checking**, soundex and stemming technologies mean users find the results they need regardless of spelling skills, spelling variations or language inflection.
- **original search queries** can be directly passed to databases and other resources, allowing patrons to 'click-through' to continue their search rather than having to reformulate their query.
- **Koha livesearch** guesses what you're typing and offers real-time suggestions in an auto-complete drop-down box.
- **unique search options**--popularity, date acquired, format, and more--streamline searches.

## Now, they can!

With Koha's web-based interface and self-service tools, patrons can:

- ▶ manage their account
- ▶ place & manage reservations
- ▶ renew items
- ▶ create & share Book Lists
- ▶ receive e-mails on overdues & reserves
- ▶ keep track of acquisitions via targeted RSS feeds
